

## MODELS

- FORD TRANSIT MID/HIGH ROOF
- MERCEDES SPRINTER STANDARD/HIGH ROOF

The all-new VC1000 euro-style van crane from Venturo features a horizontally articulated jib boom to reach deep within the van with a capacity of 1,000 lbs. at maximum reach. The crane allows safe and productive material handling without the need for a forklift or a heavy, expensive lift gate.

The Venturo VC1000 van crane utilizes a unique dual floor and ceiling mounted telescopic mast that integrates with the van structure itself to ensure maximum structural integrity. The horizontally articulated boom uses roller bearings that allow the operator to guide the load easily in and out of the van. A unique rotation control feature utilizes two hand levers that operate cable controlled multi-position rotation locks. These rotation locks enable the operator to lock the crane in various positions. This key feature adds an additional safeguard for the operator as the load is being loaded and unloaded.

## FEATURES

- 1,000 lbs Maximum Capacity
- 6,000 ft-lbs Crane Rating
- Mast Height: Telescopic
- Extended Boom Reach: 6 ft
- Stowed Boom Length: 4 ft, 6 in
- Weight: 220 lbs
- Winch: 12V DC, 1.3 HP motor, 25.5 fpm

## STANDARD EQUIPMENT

- 12 ft corded pendant controller
- 25 ft of 3/16" aircraft-quality, wire rope
- Hand lever operated multi-position rotation lock

## MINIMUM REQUIREMENTS

- Electrical Power Source: 12V DC

## OPTIONS

For additional vehicle stability, a manual crank down jackleg is available that installs quickly and easily into the vehicle's standard Class III receiver hitch.
